Where Are We Going?

- MU/MACRA/ACI
- States Issues
- Specialty Pharmacy Impact on Drug Trend
The Evolution of Meaningful Use

Everyone Moves to Stage 3 in 2018
EHR Certification

- Now part of the Advancing Care Information (ACI) Program
- EHRs will need to support the functionalities of NCPDP SCRIPT 10.6

Other Components of Certification:
- Diagnosis (reason for prescription)
- Metric Unit of Measure for oral liquids (i.e. mL)

EHRs must support these transactions
Currently widely used:
- Create new prescriptions (NEWRX)
- Refill prescriptions (REFREQ, REFRES)
- Request and receive medication history information (RXHREQ, RXHRES)

Not widely used:
- Change prescriptions (RXCHG, CHGRES)
- Cancel prescriptions (CANRX, CANRES)
- Receive fill status notifications (RXFILL)
A Closer Look at ACI Scoring

Base score comprised of six customizable objectives and accounts for half of ACI score:

- Protect Patient Health Information using a risk analysis (mandatory)
- Electronic Prescribing
- Public Health and Clinical Data Registry Reporting
  - Immunization registry reporting is mandatory; other registry reporting is optional
- Health Information Exchange
- Coordination of Care Through Patient Engagement
- Patient Electronic Access
- More flexible reporting e.g. 90-day period for attestations and calendar year reporting

Public Health Registry Bonus Point. Immunization registry reporting is required. A bonus point can be earned for reporting to other public health registries.

All scores add to achieve the total ACI score

- Possible points: 131
- Maximum points awarded with a 100 point ACI score with loss of points for not meeting the 100-point threshold.
Trends Driving State Legislative Action

- **Opiate Addiction Crisis**
  - 30,000 Americans died in 2014, quadrupled since 2000
  - Often begins with legitimate prescriptions following surgery or injury
  - States are moving rapidly to legislate changes to address the problem

- **Advent of Biologics and now Biosimilars**
  - FDA recently approved the 2\textsuperscript{nd} Biosimilar product
  - Biosimilars are not equivalent to the reference drug
  - FDA must identify it to be “interchangeable”
  - Prescribers need to be aware when substitutions are made so outcomes and side effects may be monitored

- **Expansion of Mid-Level Prescribers**
  - Prescriptive authority and supervisory rules are changing

- **Push for greater interoperability and communication between pharmacies and prescribers**
Opiate Addiction Crisis

Prescription Drug Monitoring Programs and impact on EHRs

• 49 states have PDMPs that collect controlled substance dispensing data from pharmacies and in-office prescribers
  • Provide access to prescribers, pharmacies, and typically law enforcement
  • Helps to prevent “doctor shopping”
  • Identifies top prescribers of controlled substances
  • Building on the success, states are stepping up the requirements for usage
• 19 states now require prescribers to access the PDMP prior to prescribing certain CS drugs
  • Several others have active legislation in the works
• Some states are mandating interoperability between the EHR and PDMP to facilitate access
  • Even without mandate, prescribers will need access within EHR workflows
• 1 state has mandated that ALL prescriptions will be reported to PDMP by January 2018
  • Inclusive of non-controlled substances, and cash prescriptions
  • Will provide a much more complete Medication History that typically provided by payers
Opiate Addiction Crisis

Other Impacts on EHRs and ePrescribing

- **EPCS Mandates**
  - 2 states have mandates in place (New York and Minnesota)
  - 3 have proposed legislation, and others are rumored to be contemplating a mandate

- **Prescribing Limits for Opiates**
  - Many states are more strict than DEA on expiration and days supply limits
  - 1 state just passed a significant 7 days supply limit on many opiate prescriptions
    - Requires *pharmacy to notify prescriber* if lesser amount is dispensed
    - EHR must receive and store patient’s “Non Opiate Directive Form”
  - Another governor just announced a plan to put quantity and days supply limits on opiates
All states except MO have a PDMP database to monitor controlled substance prescriptions.

19 States + Guam require prescriber to check PDMP before prescribing a controlled substance.

Checking PDMP is challenging because access is not embedded into the ePrescribing workflow of the EHR.
A national PDMP solution is a key strategic initiative for NCPDP in 2016. The proposed solution would allow all states to adopt a minimal data set and standard transaction to submit data to a national repository.
Requires all prescriptions issued in New York to be transmitted electronically (with limited exceptions).

- Controlled and non-controlled substances
- and medical devices/syringes dispensed at a pharmacy

Potential Penalties:
- Fines and/or jail
- License revocation or suspension

Applies to:
- Physicians
- Dentists
- Podiatrists
- Physician Assistants
- Nurse Practitioners
- Mid-wives
- Optometrists

Prescribers are still required to check the New York State prescription monitoring program registry before prescribing a controlled substance in compliance with earlier I-STOP regulations.
Veterinarians eRx cannot be issued timely and delay would adversely affect patient’s medical condition

Prescriber has a waiver* Prescription will be dispensed at a pharmacy outside of New York State

ePrescribing not available due to temporary electrical or technological failure

Rx for controlled substance cannot exceed 5 day supply

The Commissioner of Health may grant a waiver, not to exceed 1-year, for economic hardship, technological limitation or other exceptional circumstance.

Bill introduced 3/9/16 exempts prescribers who write no more than 25 prescriptions a year. Prescribers must apply for waiver yearly, note in patient’s record each time exemption is used and terminate certification if he/she exceeds 25 prescriptions.
I-STOP Impact

New York is leading the nation in the enablement of electronic prescribing of controlled substances (EPCS)

- 77% of prescribers are active ePrescribers, compared to 60% nationally
- 58% of prescribers are enabled for EPCS, compared to 9% nationally
- 98% of pharmacies engaged in ePrescribing are capable of receiving EPCS prescriptions

EPCS Enablement

- March NY EPCS transaction volume = 1.134 million
  - By comparison, EPCS transactions for NY in November 2014 = ~8,000 EPCS prescriptions
  - Equates to 40% of all U.S. EPCS prescriptions
- Software vendors serving 99% of New York prescribers are certified for EPCS
- Doctor shopping is down 90% since I-STOP went into effect in August 2013**
- As of May 1, 2016: 5,300 waiver requests granted

Main Opioid Legislation Update:
- Signed on 4/19/16; Similar to iSTOP
- Mandates prescribers (and sometimes pharmacist) to check state PDMP database
- Requires EPCS for opioid prescriptions starting 7/1/17

Sources: Surescripts, **A.G. Schneiderman,
Eyes on New York

- More states are expected to follow New York’s lead to address the nationwide opiate abuse crisis
  - 2 new states introduced legislation in 2016 to mandate EPCS
  - More states are requiring prescribers to access the PDMP before prescribing, and 2 have passed laws requiring interoperability between the PDMP and EHRs
  - Nebraska is making the bold move of requiring ALL prescriptions to be submitted to the PDMP effective January 2018
  - Massachusetts new opiate law requires new forms of communication between pharmacy and prescriber
  - At least two other states are rumored to be considering I-STOP-like legislation

- These mandates will dramatically advance progress toward providing truly complete medication histories to clinicians
Expanding Face of ePrescribing

Prescribers
- Multi-Specialty Physicians
- Dentists
- Podiatrists
- Physician Assistants and Nurse Practitioners
- Clinical Nurse Specialists
- Clinical Psychiatrists
- Mid-Wives
- Ophthalmologists

Settings
- Solo/Group Practices
- HMO/Other Health Care Corp
- Hospital or Academic Health Centers
- Community Health Centers
Growth of Pharmacy Specialty Spend

Specialty Drugs

• Used to treat chronic catastrophic illnesses like multiple sclerosis, hepatitis C & rheumatoid arthritis
• Often injected or infused
• Costly

2015

>2% of Rxs written for Specialty Drugs

37% or more of Pharmacy Plan Costs

By 2019

Nearly 50% of Pharmacy Plan Costs

Source: Express Scripts Lab
The prescriber doesn’t know which pharmacies are part of the limited distribution network(s).

Data required to ultimately dispense a specialty medication is not included in the original prescription; in fact, SCRIPT may not even have the fields to accommodate.

There is no standard definition of specialty, so no specialty medications are flagged leading to specialty drugs being prescribed in the same manner as non-specialty.

The process requires coordination between the pharmacy and prescriber, and there are no transactions that facilitate status updates or such coordination.
ePrescribing Incentives

- Meaningful Use as we know it today is evolving to a Merit-based Incentive Payment Systems (MIPS)
  - While the structure of MIPS is different than MU, most of the requirements of MU will still apply
  - MIPS starts in 2019, based on performance in 2017
  - CMS has said that “TBD” MU Stage 3 measures will qualify for MIPS in 2017 and 2018
  - MU Stage 3 requires ePrescribing for 50% of eligible prescriptions

A single MIPS composite performance score will factor in performance in 4 weighted performance categories that will drive reimbursement levels:

- Quality (30%)
- Resource use (30%)
- Clinical practice improvement (15%)
- Meaningful use of certified EHR technology (25%)
Indications-Based ePrescribing

- Renewed focus on inclusion of medication-indication on electronic prescription

- The Agency for Healthcare Research and Quality (AHRQ) funding for multi-year project to design, build and test prototype of indications-enabled CPOE system
  - Year 1 (completed): Convened stakeholder expert panels
  - Year 2 (in process): Design and Build working prototype
  - Year 3 (2017): Test prototype and provide recommendations and lessons learned from pilot project

Project Overview
AHRQ has funded the Brigham and Women’s Hospital (BWH) Center for Patient Safety Research and the Massachusetts College of Pharmacy (MCPHSU) to lead a multi-year project to improve HIT prescribing safety by redesigning computerized prescriber order entry (CPOE) to incorporate a medication indication into the prescription order.
